

# A Crew You Can Count On

Hendrickson understands specifying the right suspension is a high priority for decision makers in the fire and rescue industry. These components affect the performance of the vehicle, the life of the vehicle and equipment, the frequency of maintenance, and the comfort and safety of the operators.

## Meet Our Crew

### The Original Steel Spring: RT™

- One of the first suspensions
- Walking beam equalizes truck load over both axles
- Excellent stability and durability over uneven terrain
- Ride quality is not priority

### The Upgrade Rubber: HN® FR

- Contains all the exceptional features of RT
- Added rubber bolsters to dissipate road shock
- Improved ride quality
- Lowest maintenance

### The Deluxe Air: FIREMAAX® EX

- Best protection to vehicle body and equipment
- 2x the roll stability against other air suspensions. As stable as a walking-beam suspension
- Excellent handling in lane change and road maneuvers
- Constantly maintains proper ride height
- Lower maintenance vs. steel spring

If you demand the ideal balance of all performance features – spec FIREMAAX® EX!

FIREMAAX EX delivers an unparalleled combination of a soft ride, vehicle protection and reliable roll-stability.
